

Do you want to
help improve IBD
treatment
and care and
support **research**?

We are the national registry for IBD, which includes Crohn's disease, ulcerative colitis and other forms of IBD.

We collect and analyse patient data to help improve treatment and care for people with IBD. Our data can also be used to support vital research.

Why others joined

Clemmie

"I joined the IBD Registry recently and found completing the new consent form very easy.

It didn't take much time and felt like my data was safe and secure. If you want to help others with IBD, support IBD research and help improve IBD services, I definitely recommend joining the Registry. You can really help to support improvements in IBD care nationally."

Ian

"I was diagnosed with Crohn's disease in 2004 and my journey has had many ups and downs. I joined the IBD Registry to drive research and improve understanding of IBD to help make a difference to the lives of everyone with IBD. I encourage anyone living with IBD to join the IBD Registry today and support this valuable resource."

How you can help

Joining the IBD Registry means information about your diagnosis, treatment and care can be collected from your hospital team, and from you directly.

Sharing your data with us can help measure the quality of healthcare people with IBD receive and the impact of new treatments. This vital information can help IBD services across the UK give the best possible care. It can also support new research.

Scan the QR code or visit ibdregistry.org.uk/join to find out more and sign up.
