

Can you help improve IBD treatment and care and support research?

The IBD Registry can collect patient data from your hospital team and from you directly. Analysing this information helps measure the quality of care people with IBD receive and the impact of new treatments. This helps IBD services across the UK give the best possible care. The information can also support new research.

If you have IBD, you can join the IBD Registry to agree to your data being included in this valuable resource.

Find out more at ibdregistry.org.uk or scan the QR code. You can also contact us at support@ibdregistry.org.uk or call 0203393 3969
